

We are looking for a Test Engineer who will thoroughly inspect our products before they're launched.

As a Test Engineer in our company, you will work closely with the production team to understand why we're building a product and what the specific requirements are. Then, you will run a series of tests through all stages of production to identify potential malfunctions and recommend improvements.

Ultimately, you'll ensure our final products meet our safety and quality standards.

## **Responsibilities**

- Gather product requirements (e.g. functionalities, speed, safety standards)
- Inspect raw materials and machinery to identify defects and malfunctions
- Monitor all production stages to ensure safety procedures are followed
- Run quality controls on components and final products
- Develop test environments and test cases for all mechanical and electrical systems
- Analyze test results, detect issues and track root causes
- Suggest fixes and improvements
- Document technical issues and solutions
- Build automated testing systems for regular checks
- Ensure our products and procedures meet industry standards (e.g. ISO)

## **Requirements and skills**

- Previous experience as a Test Engineer or similar role
- Familiarity with various testing techniques
- Hands-on experience with Quality Management Systems (QMS)
- Knowledge of quality standards and regulations
- Great troubleshooting skills

- Analytical mindset
- BSc in Mechanical Engineering, Industrial Engineering or relevant field
- Additional certification in Quality Assurance is a plus
